

TAKE CAUTION WHERE **RED TIDE IS PRESENT**

Red Tide is caused by naturally occurring algae but it can be harmful to marine life and it may cause the following symptoms in people:

- Eye, throat or skin irritation
- Coughing or sneezing

Symptoms can be more severe for people with serious respiratory issues—avoid the beach if you have asthma or a respiratory condition

Never touch or swim near dead fish

Wear shoes to prevent injuries from stepping on bones of dead fish

Keep pets away from water, sea foam and dead fish

Red Tide may not be present at all beaches
